Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

This is the integration of the I.O.01 Report drawn up following the official approval of EACEA concerning the entry into the *Let's Fit!* project of the Greek sports association Gymnastikos Athlitikos Syllogos ILISOS (Gas Ilisos) to replace the Croatian partner who retired from the Erasmus Plus project in April 2019.

Considering that the version published in June 2019 (M6) lacked Greek data, as at the date of publication the official approval of EACEA had not yet been received, it was considered appropriate for the purposes of the project to integrate the missing data and draw up thus a complete report of the data of all 6 partner countries.

1

1. Introduction

*Erasmus Plus*¹ is the program of the European Union for Education, Training, Youth and Sport 2014-2020. The program, approved with EU Regulation N. 1288/2013 of the European Parliament and of the Council, combines and integrates all the financing mechanisms implemented by the European Union until 2013:

- the Lifelong Learning Program (Comenius, Erasmus, Leonardo da Vinci, Grundtvig)
- Youth in action
- the five international cooperation programs (Erasmus Mundus, Tempus, Alfa, Edulink and the bilateral cooperation program with industrialized countries). It also includes the Jean Monnet assets and includes support, for the first time, in sport.

The integrated program allows obtaining an overview of the available grant opportunities, aims to facilitate access and promotes synergies between the different sectors by removing the barriers between the various types of projects; it also wants to attract new actors from the world of work and civil society and stimulate new forms of cooperation.

In the sports field, the program focuses on transnational projects aimed at supporting amateur sports and facing cross-border challenges such as contracting match-fixing, doping, violence and racism, as well as promoting good governance, gender equality, social inclusion and physical activity for all.

In particular, these activities must aim at:

- addressing cross-border threats to the integrity of sport
- promoting and support good governance in sport and athletes' parallel careers
- promoting voluntary activities, social inclusion and equal opportunities in sport
- increasing awareness of the benefits of physical activity for health
- increasing participation in sport.

The program funds collaborative partnerships and non-profit sport events, and supports actions that aim to strengthen data for policy making and promote dialogue with stakeholders. Actions in the sports sector are mainly focused on grassroots sports. At the systemic level, actions in this area should contribute to the development of the European dimension in sport; from an individual perspective, the projects supported by Erasmus + must lead to increased levels of participation in sport and the promotion of physical activity.

¹ ANNEX 1 – Programma Erasmus Plus

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

It is proven that regular physical activity helps prevent and treat chronic non-communicable diseases (NCD) such as heart disease, stroke, diabetes and breast and colon cancer. It also helps prevent hypertension, overweight and obesity and can improve mental health, quality of life and well-being, although this hiring much of the world is becoming less active, including Europe².

The current low level of activity among EU citizens remains very worrying. According to the Special Eurobarometer report on Sport and Physical Activity³, 54% of all respondents did not perform any vigorous activity and 44% did not perform any moderate physical activity. Moreover, 13% of EU citizens did not walk for at least 10 minutes at a time on a given day in a week.

The primary objective of “Let's fit healthy life! The role of sport in regenerating deprived areas” project is therefore the promotion of sporting practice in accordance with it is indicated in the guidelines “EU Physical Activity Guidelines”⁴.

It lasts a period of two years, from 1st January 2019 (M1 - month 1) to 31st December 2020 (M24 - month 24), involving 7 partners:

- P1 Lead Partner - Regione Piemonte – ITALY
- P2 partner - Zemgale Planning Region – LATVIA
- P3 partner - Carvalhais Sport, Cultural and Social Association – PORTUGAL
- P4 partner - Gymnastikos Athlitikos Syllogos ILISOS (Gas Ilisos) - GREECE
- P5 partner - Club Deportivo Nordic Walking Castilla y Leon (Palencia) – SPAIN
- P6 partner - Municipality of Valga – ESTONIA
- P7 partner – ASD Scuola del Cammino Fitwalking – ITALY

At the moment of the editing of this report the partner involved are 6 and the countries involved are 5 because the Croatian Partner - Croatian Mountaineering Association “Belišće” – has given up the project and the entry of the new one is still pending.

The Croatian Partner will be replaced by Gymnastikos Athlitikos Syllogos ILISOS (Gas Ilisos) from Greece, this new partner will join the partnership and the activities of I.O.02 during summer period 2019, after the official EACEA approval.

P1 - Coordinator - Regione Piemonte – ITALY

Piedmont Region, with more than 4.300.000 inhabitants, is the government of an Italian northwestern region. Regional policies are aimed at promoting the economic and social development of Piedmont and its communities, by supporting and promoting balanced and sustainable economic growth, social cohesion, educational programs, research, plans for environmental protection, development of sustainable tourism and promotion and enhancement of Piedmont’s cultural and historical heritage. The Regional Department of Culture, Tourism and Sports has specific skills in planning, monitoring and

controlling the quality of life of people, health care and development of social relations, also through sport activities.

Some sports events benefiting of regional contributions are: "Games without barriers" Project, "Piedmont Region for sports at school" Project, "Sports Spring" Project, ..

The programmatic activities of the Regional Department of Sports aim to offer the opportunity to experiment, learn and practice physical activities, combined with the cultural and educational support that sport introduces in own personal growth, also with a correct food education. The Piedmont area become famous as the Official Organizer of the 2006 XX Olympic Winter Games, which took place from 10 to 26 February 2006, in Turin and in 8 other mountain locations in Piedmont. The regional territory also hosted, from 10 to 19 March 2006, the IX Paralympic Winter Games. Moreover, the Monferrato area of Piedmont, in 2017 obtained a prestigious recognition by ACES EUROPE as European Community of Sport 2017; the same for the City of Turin, in 2015, as "European Capital of Sport".

P2 partner - Zemgale Planning Region (ZPR) – LATVIA

Zemgale Planning Region (ZPR) is a public entity established in 2006, under the direct supervision of Environmental Protection and Regional Development Ministry of the Government of Latvia.

It occupies a territory of 10,733 Km², that is about 16.6% of the entire Latvian territory, with a population of about 281.000 inhabitants. The main objective of Zemgale Planning Region is to ensure regional planning and coordination, as well as the cooperation between municipalities and the various governmental institutions. Administrative headquarters are located in the city of Jelgava.

Over the years, ZPR has gained extensive experience in the management of projects co-funded by the European Union, and in the last five years has acted as Lead Applicant and Cooperation Partner in about 30 projects of European relevance; therefore, ZPR has a lot of experience in the coordination of many cross-border partners, a lot of knowledge of environmental and cultural issues, practical experience in the management of large-scale projects with an infrastructure component, also providing advices to partner organizations on public, financial and reporting procurements. Zemgale Planning Region as public body together with all their 22 local municipalities are actively involved in ESF Operational Programme "Growth and Employment" noting Measures to promote local health implement various health promotion and disease prevention measures for different population groups in region and especially for groups at risk of poverty and social exclusion by improving access to health promotion and disease prevention services.

P3 partner - Carvalhais Sport, Cultural and Social Association – PORTUGAL

ADCS Carvalhais Association is a non-profit association founded in 1991, following the initiative undertaken by a group of local citizens, with the aim to promote sportive, cultural and social activities. It is based in Mirandela, a small Portuguese town located in Tua river valley, on a plateau characterized by a fertile land, where olive trees are cultivated. Each summer is organized there a round of the European Jetski Championship (on Tua River). The activities of the Association have begun with the implementation of sports initiatives, with the active involvement of local community and schools, which gradually acquired more and more importance until become a set of fixed and periodical appointments. Proposed initiatives: soccer and paintball tournaments, mountain biking, local festivals, painting and decorative art workshops, excursions on the territory, health promotion,

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

P4 partner - Gymnastikos Athlitikos Syllogos ILISOS (Gas Ilisos) - GREECE

The GAS ILISOS sports club has its headquarters in Zografou, a suburb of Athens, however its activities are undertaken in various parts of Greek territory.

One of its focal activities is the organisation of the Athens Walking Camp (known as Athens Walkamp) on a yearly basis at the settlement of Aghios Andreas that belongs to the municipality of Nea Makri. Nea Makri is situated to the northeastern part of the Attica region and its population, according to the 2011 Census, is 15,554 inhabitants. It is a forest, rural area among those that have been heavily devastated by the series of wildfires in the coastal areas of Attica in 2018 that caused the death of 100 people. The fires were the second deadliest wildfire event in the 21st century, after the 2009 Black Saturday bushfires in Australia that killed 180 people.

Athens Walkamp is an innovative effort combining the technical and scientific aspects of the walking race with the cultural and tourist dimension it encompasses in an attempt to spread walking beyond the defined limits of its competitive character (i.e. seen as a fit-walking approach).

Our aim is to strengthen the bonds of friendship of young athletes and for this reason we created this annual event which takes place at the children's camp of Aghios Andreas. The coexistence of both Greek young coming from different parts of Greece with foreigner athletes allows deepening their technical knowledge about the race walking discipline while meeting the Greek philosophy and culture. The Athens Walkamp includes, on a daily basis, sports activities (including race events) with the participation of all trainers and athletes (either belonging to sport clubs or as independent athletes) in which the role and benefits of walking to health are systematically explained and emphasized.

This year, besides the sport activities it will be also organised a seminar covering the following cross-cutting thematic issues:

- The area of Nea Makri looks at the world, regenerates the environment, prevents ecological destruction
- The social dimension of sport and the role of sports clubs
- The race walking in Greece and the world
- 9th Walkamp Review - Update Annual Race Walking Planning
- Prevention & Health: Medical Diagnosis
- FitWalking and Health in the Elderly

Other planned activities include the dissemination of sports in more deprived areas of the wider Attica region or close by such as refugee reception centers and island schools (e.g. the Salamis island in the Saronic Gulf).

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

P5 partner - Club Deportivo Nordic Walking Castilla y Leon (Palencia) – SPAIN

The organisation Club Deportivo Nordic Walking Castilla y León was founded in 2015. It is a Club of regional and national scope, registered in the General Direction of Sports of the Meeting of Castile and Leon. It is also recognized by the Spanish Mountaineering Federation, as well as the Federation of Castilla y León de Mountain. We designed an offer that tries to promote sport, and above all, health. As a Sports Club accompanies the Iberica Nordic Walking in: development of educational and informative activities; organization of sporting events of Hiking and Nordic Walking; promotion of Nordic Walking as Sports Health; development of touristic proposals related to the NW; organization of federative competitive tests; research and development of new proposals for different events.

It has taught nordic walking to more than 4000 people and are currently considered one of the most professional and consolidated proposals of this discipline in Spain, after 7 years of activity.

It also founded the company Iberica Nordic Walking, responsible for replicating the Palencia model in the rest of Spain.

Palencia is a Spanish municipality of the autonomous community of Castilla y León, capital of the province of the same name. It is located in the plain of Tierra de Campos, on the banks of the Carrión River. Located at 749 m altitude, it is 235 km from Madrid and 47 km from Valladolid, being the two closest Spanish provincial capitals. The municipality has a population of 78.892 inhabitants (2017) over an area of 94.95 km². It is an important industrial center of Castilla y León.

P6 partner - Municipality of Valga – ESTONIA

Valga is a city in southern Estonia and is the capital of the County of Valgamaa. It has about 12,000 (together with Valka 17,000) inhabitants and is located near the border between Estonia and Latvia. It constitutes a single urban core with the Latvian municipality of Valka, cut in two parts by the border line. In fact, until their separation in 1920, Valga and the town of Valka in northern Latvia were one town and now, despite its small size, the city of Valga has several peculiarities being straddling two countries, Estonia and Latvia, with two different languages and cultures. The Municipality of Valga is member of 3 organizations: The twinned City Association (8 neighboring cities of different countries), Innovation Circle Network (48 institutions-municipalities-cities in 7 countries) and Twin Cities Association (7 cities connected for friendship in Europe).

These characteristics allowed Valga Municipality to be part of an extensive cooperation network, developing over the last 20 years a great experience in organizing international conferences, seminars and workshops.

Moreover, in recent years the city government of Valga has been characterized by an active involvement of the institutions and local citizens in various activities promoted within projects co-funded by the European Commission, especially in the Health field. One of the municipal priorities is the promotion of healthy lifestyles through health, sport, education and food policies.

Th Municipality of Valga is partner of an Erasmum Plus small collaborative partnership project with the Mountain Union of Lanzo – Piemonte.

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

P7 partner - Scuola del Cammino Fitwalking Italia - ITALY

The A.S.D. Scuola del Cammino Fitwalking Italia is an amateur sports association - affiliated to the Italian Athletics Federation – and founded in 2001 as a Sport Walking School Foundation and transformed in 2013 into the current ASD Scuola del Cammino Fitwalking Italia. The purpose of the Association consists in the promotion and development of sport in the context of "popular walking", with particular attention to accessibility to sport for all. The ASD in recent years has developed specific expertise in walking, and is the reference for the technical management of the discipline of Fitwalking, project of MAP Italia s.r.l. which has just entrusted with ASD the development of the technical aspects (launched by the Former Olympic champion Maurizio Damilano). The ASD has launched initiatives and projects in the social and health topics too, with particular attention to the use of walking as physical exercise to prevent and improve health, as well as a mean of prevention alongside traditional treatments for those types of diseases defined activity "sensitive exercise".

The ASD, in addition to courses for instructors and practitioners, has also launched initiatives and projects in health sector, with particular attention to walking as physical exercise to prevent and improve health, collaborating with schools, promoting initiatives aimed at involving young people and urging policies aimed at sustainable mobility. It has experience in fostering sports activities for citizens of any age, from school level to big events with crowds of people, from training practices for students to walking events as instrument for improvement of healthy behaviors for elders.

The project also makes use of some support partners, ASL TO 4 for Italy and Gimnasio Clube Mirandense for Portugal.

Piedmont Region is supported in the implementation of health promotion activities by the **Local Health Authority - ASLTO4**, whose medical and expert staff has confirmed the willingness to take part in the planned activities. ASLTO4 (SSD Health Promotion - Dr. Giorgio Bellan) has already experienced in several initiatives in the field of health promotion and claims a vast catalog of best cases: Promotion of Adapted Physical Activity (AFA), Walking Groups, Promotion of Nordic Walking, ... In particular, the recent project "Fight against sedentary behavior in adults in ASLTO4" has activated a network of shared collaboration between Municipalities and associations, whose purpose was the organization and management of Adapted Sport Activities/AFA, to foster and monitor local health needs of citizens. AFA is a special type of gymnastics that can improve mobility. Instructors received a data collection form, to be completed for each participant, in order to record: personal data, how to submit to the course, results of a battery of physical tests (get up and go, walking speed, squat) and judgments about the benefits of the activity. About Nordic walking, a special survey template has been prepared, managed by the instructors of the local associations. The evaluation of the walking group dissemination program follows the suggestions provided by the Regional Working Group envisaged by the Regional Prevention Plan - Action 2.5.1 of Piedmont.

The partners will work together to achieve specific goals:

- to involve decentralized territories and marginal natural/rural areas as active places to live sports lifestyles and practice walking and Fit-walking and power walking;
- to improve local capacity to promote an active lifestyle and experiment with innovative schemes to rethink and manage natural resources and deprived territories (non-urban) with healthy perspectives;

- to inspire various European territorial areas to implement pilot Health initiatives, promoting specific physical activity and more active lifestyles (exchange of good practices);
- to improve awareness, in order to stimulate local / regional stakeholders, to adopt points of view associated with sport and health in local development policies, in deprived areas;
- to raise awareness on the value of sports and physical activity in relation to the personal, social and professional development of individuals;
- to establish a sustainable transnational network of Fit-walking expertise in Europe aiming to exchange good practices and experiences;
- to develop a model for the education and training of athletes and sports amateurs in the field of Fit-walking discipline.

7

a. Key facts⁵

Nearly half of Europeans never exercise or play sport, and the proportion has increased gradually in recent years

- Two in five Europeans (40%) exercise or play sport at least once a week, including 7% who do so regularly (at least five times per week). However, almost half of respondents (46%) never exercise or play sport.
- The percentage of those who never exercise or play sport is 46%, this is a continuation of a gradual trend since 2009.
- Less than half of respondents (44%) do some form of other physical activity (such as cycling, dancing or gardening) at least once a week, while 35% never do this kind of activity at all.
- The proportion of those who never practice physical activities has increased since 2013, from 30% to 35%.
- Overall, in the EU, men exercise, play sport or engage in other physical activity more than women. This disparity is particularly marked in the 15-24 age group, with young men tending to exercise or play sport on a regular basis considerably more than young women. The amount of regular activity that people do tends to decrease with age.
- Engagement in sport and physical activity is also less prevalent among people with lower levels of education and among those with financial difficulties.
- The proportion of people who exercise or play sport regularly or with some regularity is highest in Finland (69%), Sweden (67%) and Denmark (63%). Respondents are least likely to exercise or play sport in Bulgaria, Greece and Portugal (in each of these countries, 68% never exercise or play sport).

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

In a given week, more than half of Europeans do not do any vigorous physical activity, and around half do not engage in moderate physical activity

- When asked about their levels of physical activity within a week, more than half of all respondents (58%) did not do any vigorous activity and 47% did not do any moderate physical activity.
- Among those who do vigorous physical activity, the majority (54%) spend an hour or less per day doing so, while 43% of them spend more than an hour.
- Most respondents spend an hour or less doing moderate physical activity (63%), while 34% spend more than one.

8

15% of Europeans do not walk for 10 minutes at a time at all in a weekly period, while 12% sit for more than 8.5 hours per day

- Most EU citizens (61%) say they walked for at least ten minutes at a time on four or more of the last seven days. However, 15% did not walk for at least 10 minutes at a time on any day within a week.
- On a usual day, around two thirds of respondents (69%) spend between 2.5 and 8.5 hours sitting, while 12% sit for more than 8.5 hours and 16% for no more than 2.5 hours.
- Most of respondents spend slightly sitting more than 5.5 hours .

Formal sport settings are less popular than informal settings such as parks or outdoors, the home or the journey between home and work or school

- Sport or physical activity takes place in a wide range of locations, most commonly in parks and outdoors (40%), at home (32%) or on the journey between home and school, work or shops (23%).
- In 17 countries, the most common setting for sport or physical activity is the park or outdoors; this is highest among respondents in Finland (67%). The home is the most popular setting among respondents in nine countries, mostly in Eastern Europe, while in two countries the preferred setting is on the way between home and school, work or shops.
- Three in ten EU citizens say that they are members of a club where they participate in sport or recreational physical activities, specifically a sport club (12%), a health or fitness centre (11%), a socio-cultural club (3%) or another type of club (7%).

The main motivations for participation in sport or physical activity are improved health and fitness. Lack of time is the principal barrier.

- The most common reasons for engaging in sport or physical activity are to improve health (54%) and to improve fitness (47%). Other popular reasons include relaxing (38%), having fun (30%) and improving physical performance (28%).
- A lack of time is by far the main reason given for not practising sport more regularly (40%). Other factors mentioned are a lack of motivation or interest (20%) and having a disability or illness (14%).

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

Most Europeans think that there are opportunities available locally to be physically active, but many do not think their local authority does enough

- Three quarters of respondents (74%) agree that in their local area there are many opportunities to be physically active. A similar proportion of them (73%) think that their local sport clubs and other providers offer such opportunities.
- There are mixed views as to whether local authorities do enough to provide their citizens with opportunities to be physically active: 39% of respondents think that they do not do enough, while 49% think they do.
- Views on opportunities for physical activities are most positive in the Netherlands, Denmark, Sweden and Germany, and are least positive in Bulgaria, Romania, Croatia and Italy.

6% of respondents engage in voluntary work that supports sport activities

- Overall, 6% of EU citizens say that they engage in voluntary work that supports sport activities.
- People who volunteer in sport do a range of different activities, most commonly organising or helping to run a sporting event (33%), followed by coaching or training (27%).

b. Eligibility with the objectives of the project

These data clearly indicate how necessary are actions that encourage the adoption of an active lifestyle and promote sports. The project pursues this aim by setting the following specific objectives to:

- involve decentralized territories and marginal natural/rural areas as places to live an active lifestyle and practice walking, Fitwalking and power walking;
- improve the local capacity to promote an active lifestyle and experiment with innovative schemes to re-think and manage natural resources and disadvantaged territories (non-urban);
- inspire various European territorial areas to implement pilot initiatives on health, promote specific physical activities and more active lifestyles (exchange of good practices);
- improve awareness, in order to stimulate local/regional stakeholders to adopt common points of view in the adoption of policies for the promotion and development of physical and sporting activity in the local area;
- increase awareness of the value of sport and physical activity in relation to the personal, social and professional development of individuals;
- create a sustainable transnational network of Fitwalking skills in Europe in order to exchange good practices and experiences;
- develop a model for the education and training of athletes and sports amateurs in the field of the Fitwalking discipline.

Palencia Nordic
Walking

c. Physical activity, exercise and Fitwalking

10

Physical activity is defined as any body movement produced by skeletal muscles that requires energy expenditure and is a fundamental means of improving people's physical and mental health. It reduces the risks of many non-communicable diseases and favors society by increasing social interaction and community engagement.

Physical activity should not be confused with exercise. Physical exercise is a subcategory of planned, structured, repetitive and targeted physical activity in the sense that the improvement or maintenance of one or more components of the physical form is the goal. Physical activity includes physical exercise and other activities that involve body movements and are carried out in the context of play, work, active transport, household chores and recreational activities.

The UNESCO General Conference noted in the *International Charter of Physical Education, Physical Activity and Sport*⁶ that "the practice of physical activity and sport is fundamental for everyone".

Physical activity is important for all ages and should be integrated into everyday life.

To reduce sedentarism it would be sufficient to change one's routine and introduce new good habits such as walking/cycling from home to work/school.

It has been shown that enhancing the proposal of physical activity by encouraging patients to practice it is an economically advantageous intervention both for primary and secondary prevention as it prevents the growing burden of chronic non-communicable diseases⁷.

Considered the data previously indicated, for the project *Let's fit healthy life!* walking/Fitwalking was chosen as a physical reference activity because walking is the basis of human activity, its characteristics are clearly winning:

- It is accessible to all
- it's easy to practice
- it is recommended for all ages
- it does not require special equipment
- it can be practiced anywhere in the city and in rural areas
- it is socializing
- the health benefits are scientifically proven
- it is an excellence of the Piedmont region : the Fitwalking technique was in fact codified by Giorgio and Maurizio Damilano, sport champions, who have spread it from Piedmont to national and international level.

2. A global action plan

WHO has developed a new global action plan to help countries scale up policy actions to promote physical activity⁸. It responds to the requests by countries for updated guidance, and a framework of effective and feasible policy actions to increase physical activity at all levels.

The plan sets out four objectives and recommends 20 policy actions. The four objectives are:

1 Create active societies – social norms and attitudes

Create a paradigm shift in all of society by enhancing knowledge and understanding of, and appreciation for, the multiple benefits of regular physical activity, according to ability and at all ages.

1. Implement best practice communication campaigns, linked with community-based programmes, to heighten awareness, knowledge and understanding of, and appreciation for, the multiple health benefits of regular physical activity and less sedentary behaviour, according to ability, for individual, family and community well-being.
2. Conduct national and community-based campaigns to enhance awareness and understanding of, and appreciation for, the social, economic, and environmental co-benefits of physical activity, and particularly more walking, cycling and other forms of mobility involving the use of wheels (including wheelchairs, scooters and skates) and thereby make a significant contribution to achievement of the 2030 Agenda for Sustainable Development.
3. Implement regular mass participation initiatives in public spaces, engaging entire communities, to provide free access to enjoyable and affordable, socially- and culturally-appropriate experiences of physical activity.
4. Strengthen pre- and in-service training of professionals, within and outside the health sector, to increase knowledge and skills related to their roles and contributions in creating inclusive, equitable opportunities for an active society including, but not limited to, the sectors of: transport, urban planning, education, tourism and recreation, sports and fitness, as well as in grassroots community groups and civil society organization

2 Create active environments: spaces and places

Create and maintain environments that promote and safeguard the rights of all people, of all ages, to have equitable access to safe places and spaces, in their cities and communities, in which to engage in regular physical activity, according to ability.

1. Strengthen the integration of urban and transport planning policies to prioritize the principles of compact, mixed-land use, at all levels of government as appropriate, to deliver highly connected neighbourhoods to enable and promote walking, cycling, other forms of mobility involving the use of wheels (including wheelchairs, scooters and skates) and the use of public transport, in urban, peri-urban and rural communities.
2. Improve the level of service¹ provided by walking and cycling network infrastructure, to enable and promote walking, cycling, other forms of mobility involving the use of wheels (including wheelchairs, scooters and skates) and the use of public transport, in urban, peri-urban and

⁸ Global action plan on physical activity 2018–2030: more active people for a healthier world. - © World Health Organization 2018 - <https://apps.who.int/iris/bitstream/handle/10665/272722/9789241514187-eng.pdf>

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

rural communities, with due regard for the principles of safe, universal and equitable access by people of all ages and abilities, and in alignment with other commitments.

3. Accelerate implementation of policy actions to improve road safety and the personal safety of pedestrians, cyclists, people engaged in other forms of mobility involving the use of wheels (including wheelchairs, scooters and skates) and public transport passengers, with priority given to actions that reduce risk for the most vulnerable road users in accordance with the safe systems approach to road safety, and in alignment with other commitments.
4. Strengthen access to good-quality public and green open spaces, green networks, recreational spaces (including river and coastal areas) and sports amenities by all people, of all ages and of diverse abilities in urban, peri-urban and rural communities, ensuring design is consistent with these principles of safe, universal, age-friendly and equitable access with a priority being to reduce inequalities and in alignment with other commitments.
5. Strengthen the policy, regulatory and design guidelines and frameworks, at the national and subnational levels, as appropriate, to promote public amenities, schools, health care, sports and recreation facilities, workplaces and social housing that are designed to enable occupants and visitors with diverse abilities to be physically active in and around the buildings, and prioritize universal access by pedestrians, cyclists and public transport.

12

3 Create active people: programmes e opportunities

Create and promote access to opportunities and programmes, across multiple settings, to help people of all ages and abilities to engage in regular physical activity as individuals, families and communities.

1. Strengthen provision of good-quality physical education and more positive experiences and opportunities for active recreation, sports and play for girls and boys, applying the principles of the whole-of-school approach in all pre-primary, primary, secondary and tertiary educational institutions, to establish and reinforce lifelong health and physical literacy, and promote the enjoyment of, and participation in, physical activity, according to capacity and ability.
2. Implement and strengthen systems of patient assessment and counselling on increasing physical activity and reducing sedentary behaviour, by appropriately trained health, community and social care providers, as appropriate, in primary and secondary health care and social services, as part of universal health care, ensuring community and patient involvement and coordinated links with community resources, where appropriate.
3. Enhance provision of, and opportunities for, more physical activity programmes and promotion in parks and other natural environments (such as beach, rivers and foreshores) as well as in private and public workplaces, community centres, recreation and sports facilities and faith-based centres, to support participation in physical activity, by all people of diverse abilities.
4. Enhance the provision of, and opportunities for, appropriately tailored programmes and services aimed at increasing physical activity and reducing sedentary behaviour in older adults, according to ability, in key settings such as local and community venues, health, social and long-term care settings, assisted living facilities and family environments, to support healthy ageing

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

5. Strengthen the development and implementation of programmes and services, across various community settings, to engage with, and increase the opportunities for, physical activity in the least active groups, as identified by each country, such as girls, women, older adults, rural and indigenous communities, and vulnerable or marginalized populations, embracing positive contributions by all people.
6. Implement whole-of-community initiatives, at the city, town or community levels, that stimulate engagement by all stakeholders and optimize a combination of policy approaches, across different settings, to promote increased participation in physical activity and reduced sedentary behaviour by people of all ages and diverse abilities, focusing on grassroots community engagement, co-development and ownership.

13

4 Create active systems - governance e policy enablers

Create and strengthen leadership, governance, multisectoral partnerships, workforce capabilities, advocacy and information systems across sectors to achieve excellence in resource mobilization and implementation of coordinated international, national and subnational action to increase physical activity and reduce sedentary behaviour.

1. Strengthen policy frameworks, leadership and governance systems, at the national and subnational levels, to support implementation of actions aimed at increasing physical activity and reducing sedentary behaviours, including multisectoral engagement and coordination mechanisms; policy coherence across sectors; guidelines, recommendations and actions plans on physical activity and sedentary behaviour for all ages; and progress monitoring and evaluation to strengthen accountability.
2. Enhance data systems and capabilities at the national and, where appropriate, subnational levels, to support: regular population surveillance of physical activity and sedentary behaviour, across all ages and multiple domains; development and testing of new digital technologies to strengthen surveillance systems; development of monitoring systems of wider sociocultural and environmental determinants of physical inactivity; and regular multisectoral monitoring and reporting on policy implementation to ensure accountability and inform policy and practice.
3. Strengthen the national and institutional research and evaluation capacity and stimulate the application of digital technologies and innovation to accelerate the development and implementation of effective policy solutions aimed at increasing physical activity and reducing sedentary behaviour.
4. Escalate advocacy efforts to increase awareness and knowledge of, and engagement in, joint action at the global, regional and national levels, targeting key audiences, including but not limited to high-level leaders, policy-makers across multiple sectors, the media, the private sector, city and community leaders, and the wider community.
5. Strengthen financing mechanisms to secure sustained implementation of national and subnational action and the development of the enabling systems that support the development and implementation of policies aimed at increasing physical activity and reducing sedentary behaviour.

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

a. I.O. 02 Participatory actions

Aware that every country-reality is different, in accordance with these 20 principles, in each country - in the time span between **June 2019 and August 2020** (M6 - M20) - will be proposed by each partner of the project actions aimed at promotion physical activity, specifically the diffusion of Fitwalking, a key element not only to improve people's health, also to improve the health of a territory.

The objective is in fact to propose systemic actions that operate at multiple levels directed at three main targets: young, elderly and people with chronic diseases, involving the main local actors (local administrations, public health service, schools). This synergistic approach allows the different actions not to be isolated but to fit its into a broader context of health promotion, adopting correct daily habits and different use of the territory. They also aim to create a replicable model in all countries, not just those taking part in the project.

To intercept the target of young people, schools are mainly involved, active information moments are offered regarding the benefits deriving from the regular practice of sport and motor activity emphasizing, through practical demonstrations, how it is easy and fun to change one's habits, for example by performing the journey home/school on foot instead of by car.

Local institutions such as municipalities and public health services are involved to intercept the target of the elderly and people with chronic diseases, proposing, through them, as well moments of active information and collective activity through the proposal of walking groups and events with multiple values; aggregative and promotional: promotion of physical activity, promotion of the adoption of a more active lifestyle, promotion of the territory.

In the 6 countries involved in the project (Estonia - Greece - Italy - Latvia - Portugal - Spain) at least three meetings/actions focused on health promotion will be organized following the following program:

- **1st participatory action: from April 2019 to July 2019**
- **2nd participatory action: from August 2019 to January 2020**
- **3rd participatory action: from February 2020 to August 2020.**

These actions would take the form of laboratories or participatory meetings or local sports exchanges, combined with health promotion meetings, also involving high level local/regional representatives and some famous personalities, like a sports celebrity, acting as an "Ambassador" of the project (in case). Several efforts will be made in order to ensure visibility for these initiatives, promote and extend the project at national/local level, also involving media and general public.

Other activities will be implemented - at local level - during these initiatives, like:

- awareness-raising activities in local schools;
- specific medical conventions;
- press conferences;
- meetings with health specialists;
- laboratories;
- dissemination of project activities;
- health promotion.

These events will constitute an important platform for the exchange of experiences in teaching module for trainers and coaches, aimed at testing project findings and tools, sports exchanges for health promotion and adoption.

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

These activities will be addressed to:

1) Young people

It is now proven that sedentary living can cause health problems, it is therefore necessary to provide correct information from the earliest stage of people's lives, in such a way as to encourage the willingness to practice sports.

The contemporary lifestyle often involves the use of personal means of transport such as scooters, cars, motorcycles, which the youngest also use for very short distances, especially in the urban context, it is necessary that they understand the importance of walking not only for move from point A to point B but also to keep your body in good shape and to prevent future diseases resulting from the lack of a good daily amount of walking. For this reason an action of impact on the youngest is necessary to favor their self-awareness regarding the benefits deriving from walking. These actions are planned in the form of meetings and seminars at school on a local scale and are designed in such a way that the message is not distributed academically but in a cooperative and participatory way.

2) Older people and people with chronic illnesses

Older people and people with chronic illnesses nowadays are a growing percentage of the EU population, it is very important to live the advanced age by remaining active and feeling an active part of society, doing sport with other people is a good way to do it, with another positive effect: reduced healthcare costs.

The actions are:

- Involve centers for elder people and associations that support and deal with and people with chronic diseases and Regional Public Health Service in Participatory Events.
- Create walking groups to help elders and people with chronic diseases to take care of their health and socialize, nowadays loneliness is one of the main marginality factors for seniors, physical activity can be helpful to connect people. Groups are led by coach and walking Trainer, every coach/trainer will have a "volunteer assistant" formed ad Walking Leader who can lead the groups also after the end of the project.

The Participatory actions/meetings will be divided into 2 main activities:

- Presentation of the benefits deriving from practicing correctly sports (not exceeding or reducing the average amount of daily activity suggested to the identified targets) including examples of good practices. Experts speakers in the field of Sport Medicine will attend the meeting as speakers, mostly from the public Health Services.
- Role playing/simulation with the active participation of the students. Along such activities the students will be asked to participate simulations during which both the consequences of not practicing sports, namely not walking enough, and the benefits of it will be displayed and shown directly in such a manner that they can experience directly both sides of the same issue.

All meetings, actions, exchanges, local events, will be recorded and noted: their pictures, news, information will be uploaded and post on specific website dedicated to the project and on social. Common tools for sports exchanges will be adopted. The information collected will be also useful for the editing of the final report.

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

b. M.E. 01 Multiplier sports event

The M.E1/Multiplier event will be organised in ITALY by P1 and P7 with the aim to present the project's results to a national and European audience composed by at several participants and representatives.

Foreign sports amateurs and athletes chosen by participating organizations at local level in PT, EE, LV, ES, GR (intended as representatives of other bodies, not internal staff) will be present. Each foreign delegation will be composed by 8 members (sports persons, coaches, athletes), for a total number of 40 participants from abroad.

Citizens and general public will be invited to participate to the Sports Event. Representatives of EU Institutions and IT Government, Erasmus National Agencies, Sport Associations, also relevant personalities in the field of Sport and Health will be invited to participate, too.

The event will take place in Autumn 2020 in the territory of Ceresole Reale, located about 50 km northwest of Turin in the Orco Valley, inserted in the Gran Paradiso National Park.

It will present a mix of indoor and outdoor activities:

1. In the morning a Press Conference, at the presence of Authorities and Representants of Regione Piemonte will be fixed. It will be the occasion to present the Intellectual Outputs covered by the project (above all the Guidelines) and the results until there realized.
2. Then, the same in the morning, there will be opened the fitwalking event “Let's fit healthy life!” Multiplier Event. It is a free walking event, with the aim to involve citizens and general public to participate in a perspective of health promotion.

The walk will take place in the natural context of one of the most beautiful landscapes of Orco Valley, which is characterized by a large dam, built in 1925–1931 by A.E.M. (Turin's electrical authority): this formed the famous Lake of Ceresole, which is the main tourist attraction there. The walking path is Km 8 distance long, around.

The expected number for participants is at least 400 persons. But, independently by the simulated budget for this M.E1. the partnership would aspire to reach at least 600 people attending this sports day in Orco Valley.

This M.E. implementation includes the organisation of the final event in all details: technical and organisational aspects, such as definition of the location, including safety aspects, logistic transfers, agenda, speakers, invitation and registration process, materials to be distributed, etc..

Dissemination will use all P1 and P7 channels both online and offline; news of the event will be sent to potential participants, invitation to main stakeholders and beneficiaries; documentation of the event through photos and breaking news on touristic tools. The event will be launched through media, social, newspapers, radio and TV at any level.

The project wants to create a model of an amateurish Sport Multiplier Event that could be adopted in other EU countries.

3. Analysis of local needs – Physical activity and sport promotion

17

Before analyzing the situation at local level in the project partners' countries it is necessary to specify that the data collected by the questionnaires (I.O. 01) have no statistical value, the number of questionnaires collected is in fact the same (at least 30 for each partner), it does not therefore take into account, for example, the population and, although distributed equally between gender and age groups, they do not represent a sufficient varied sample of the population.

In addition, in some cases they are inserted in "virtuous" contexts or disadvantaged realities in some aspects (geographical or economic) which have however developed forms of promotion of physical activity in the territory. They are therefore useful for photographing the situation but not for drawing data of scientific value or that can be used as a country model.

The survey tool used is the questionnaire with open and closed mixed responses modulated in 14 questions related to the practice of physical activity and related services present in the area.

The questionnaire was subjected to a sample, identifying but not of statistical value, of at least 30 people for each country, divided homogeneously between gender and age groups.

The age groups taken into consideration are: less than 18 years - 19/30 years - 31/45 years - 46/60 years - over 61 years. They have also been distributed in a homogeneous manner based on the instruction levels (higher and upper secondary).

The questionnaires were distributed by the partners on their territory:

- P2 Latvia	Zemgale Planning Region	Jelgava	31
- P3 Portugal	Carvalhais Sport, Cultural and Social Ass.	Mirandela	37
- P4 Greece	Gymnastikos Athlitikos Syllogos ILISOS (Gas Ilisos)	Zografou	30
- P5 Spain	Club Deportivo Nordic Walking Castilla y Leon	Palencia	33
- P6 Estonia	Municipality of Valga	Valga	30
- P7 Italy	ASD Scuola del Cammino Fitwalking Italia	Valle Orco	30

That said, it is useful to present the situation of the practice of sporting activity in Europe as it allows to better understand the data underlying the drafting of the project and its objective.

The data that will be presented below are taken from *Special Eurobarometer 472 - December 2017 "Sport and physical activity" Report*⁹, this report presents the results of the Eurobarometer special public opinion survey on sport and physical activity in the 28 EU Member States, following three previous Eurobarometer surveys on sport and physical activity, conducted in 2002, 2009 and 2013.

The reference text is the „*White Paper on Sport*”¹⁰ published in 2007 as the first text on sport, this was followed in 2009 by the introduction of a specific article (165 of the TFEU) in the Lisbon Treaty¹¹ which contains provisions to promote sport at European level.

Let's fit healthy life! *The role of sport in regenerating deprived areas*
 ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

In 2011, the Commission adopted a communication entitled "Developing the European dimension in Sport"¹² which includes specific actions concerning the social role of sport, the economic dimension and organization. On the basis of this communication, the Council adopted a resolution on an EU work plan for sport 2011-2014, which further strengthened European cooperation on sport by setting priorities for activities at EU level involving the sport EU Member States and the Commission. In 2012, the Council confirmed the importance of promoting physical activity as a tool to improve health by inviting the Commission to publish regular surveys on physical activity.

a. Data on sports in Europe

QB1 How often do you exercise or play sport?
 (% - EU)

(Dec. 2017 - Nov.-Dec. 2013)

Base: All respondents (N=28,031)

The percentage of Europeans who do not practice physical activity or practice from time to time is high, 46% do not practice all activities and 14% do it occasionally.

¹² SOC/413 Developing the European Dimension in sport - Brussels, 26 October 2011

http://eose.org/wp-content/uploads/2014/03/opinion_eesc_communication_european_dimension_sport.pdf

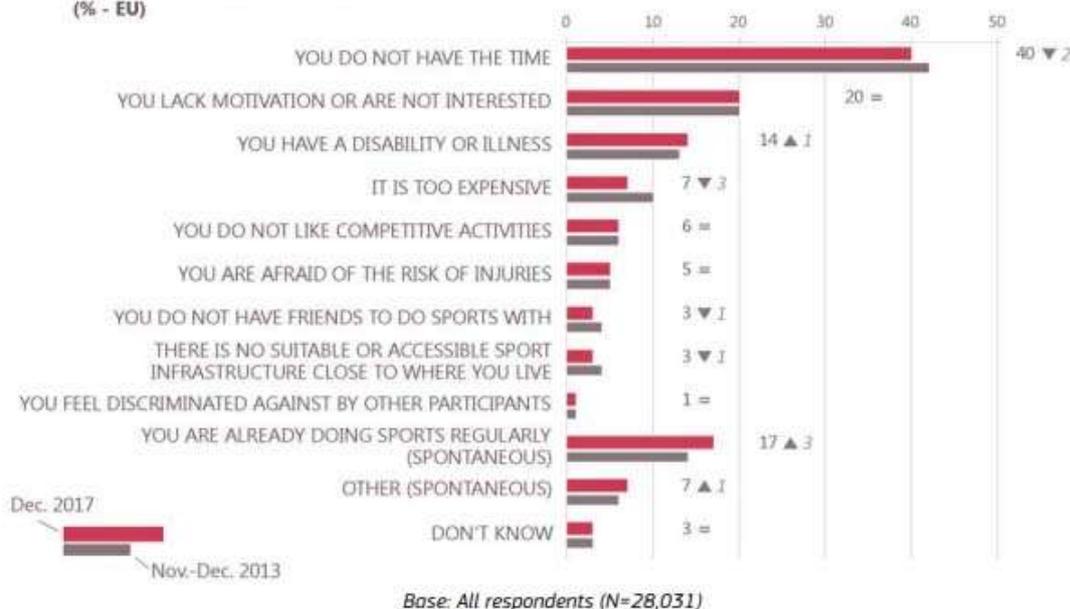

Let's fit healthy life! *The role of sport in regenerating deprived areas*
 ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

The data that emerges instead from the questionnaires collected is that of a constant or regular sporting practice (at least 2 hours a week), over 80% of the interviewees practice a physical activity¹³.

1) Do you practise sport or any physical Activity?			
YES		131	81,5%
YES - A	All the time, at least 4 hours per week	49	30,50%
YES - B	Regularly, at least 2 hours per week	48	30%
YES - C	Occasionally, less than one hour per week	29	18%
YES		5	3%
NO		30	18,5%
NO - A	I don't have time	13	8%
NO - B	I don't want/like	13	8%
NO - C	Practicing sport is too expensive	2	1,25%
NO		2	1,25%
161 Questionnaire			

The reasons for which physical activity is not practiced, however, coincide with those found in the European investigation, lack of time and lack of desire / motivation. The economic factor, or the cost to practice a sport does not seem to be a determining factor.

QB9 What are the main reasons currently preventing you from practising sport more regularly?
 (MULTIPLE ANSWERS POSSIBLE)
 (% - EU)

¹³ ANNEX 2 – TAB.2.1

Let's
FIT for a
healthy
life

of the European Union

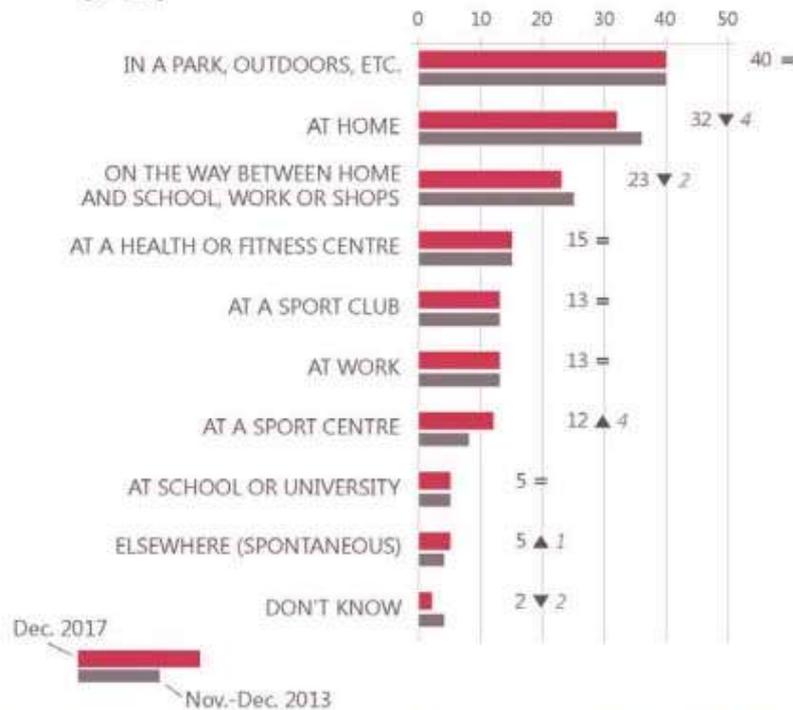

**REGIONE
PIEMONTE**

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

Probably also because the practice of activity is mainly carried out in the open, in public contexts such as green parks, at home or walking the journey home / work.

As can be seen from the graph below, 40% of Europeans do outdoor activities, 32% at home and 23% on the way home / school or home / work (the questionnaire was obviously multiple choice). Only 15% carry out the activity in a fitness center and 13% with a sports club, so less than 30% carry out organized sports activities.

QB7 Earlier you said you engage in sport or another physical activity, vigorous or not. Where do you do this? (MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: Respondents who exercise, play sport or engage in other physical activity (N= 19,982)

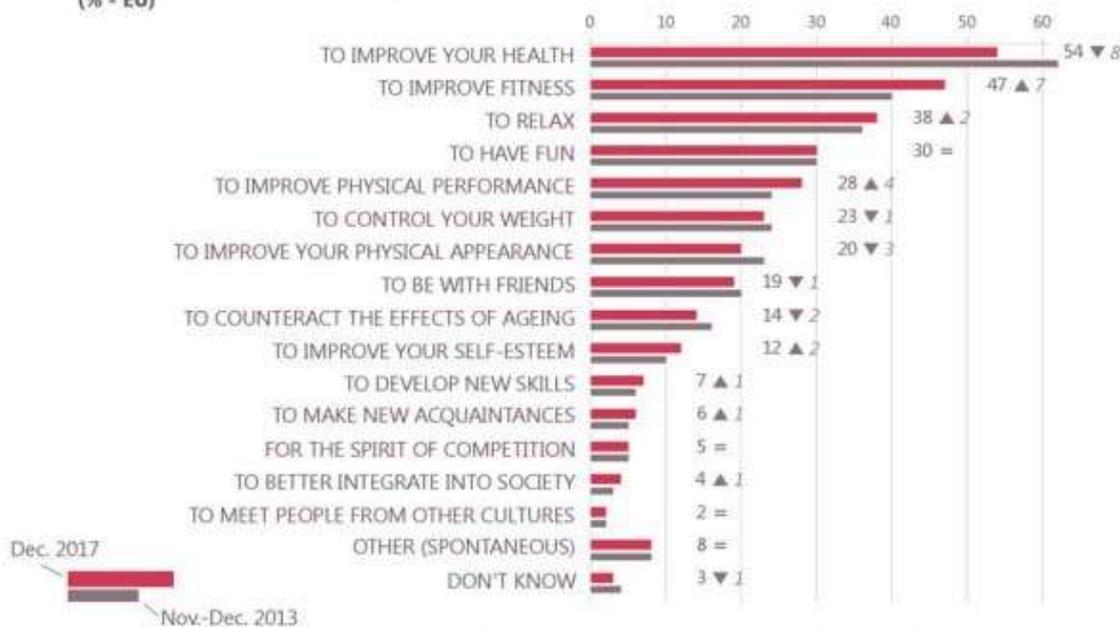

Let's fit healthy life! *The role of sport in regenerating deprived areas*
 ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

The figure is in line with what was collected from our questionnaires, more than 40% of the interviewees carry out physical activity by going on foot or by bicycle to work or to school. The figure is a little higher than the European average due to the nature of the areas in which the project takes place, they are in fact non-urban medium-small realities where if you live in the village you move on foot / by bike while if you live outside of the city it is necessary to use the car or public transport¹⁴.

12) How do you go to work/school?		
CAR	73	45,5%
FOOT	59	37%
PUBLIC TRANSPORT	13	8%
BIKE	7	4,4%
FOOT/CAR	5	3%
FOOT/BIKE	3	2
FOOT/CAR/BIKE	1	0,1
Questionnaire	161	

The reasons for which physical activity is practiced are mainly related to health 54% of Europeans practice physical activity for their own well-being, 47% to improve their physical fitness and 38% to relax.

Q88 Why do you engage in sport or physical activity? (MULTIPLE ANSWERS POSSIBLE) (% - EU)

Base: Respondents who exercise, play sport or engage in other physical activity (N= 19,982)

¹⁴ ANNEX 2 – TAB.2.12

Let's
FIT for a
healthy
life

Co-funded by the
Erasmus+ Programme
of the European Union

**REGIONE
PIEMONTE**

Let's fit healthy life! *The role of sport in regenerating deprived areas*

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

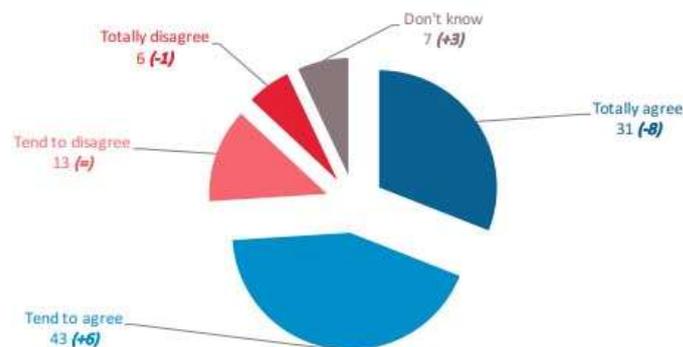

Also in this case the data are in line with what emerged from the questionnaires, the totality of the interviewees believes it is useful for personal psycho-physical well-being to practice physical activity, also believing that sport and physical activity are the bases for a style healthy life¹⁵.

2) Do you think it's useful and advisable to play sport or do any physical activities for health and the own wellbeing?		
YES	160	99,9%
NO	1	0,1%
Questionnaire	161	

3) Do you think that in your region sport and physical activity are felt as the basis of a healthy lifestyle?		
YES	146	90,5%
NO	15	9,5%
Questionnaires	161	

This is the framework for the promotion of physical activity by local authorities and the opportunities/facilities present in the area. 74% of Europeans (43% + 31%) believe that the area in which they live offers opportunities to be physically active, only 19% (6% + 13%) believe that it does not offer opportunities.

QB11.1 To what extent do you agree or disagree with the following statements about sport and physical activity?
The area where you live offers you many opportunities to be physically active (% - EU)

(Dec. 2017 - Nov.-Dec. 2013)

Base: All respondents (N=28,031)

¹⁵ ANNEX 2 – TAB. 2.2/2.3

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

In this case too the data is in line with the questionnaires, in fact almost all the interviewees believe that there are spaces on the territory to practice sports and that public services are sufficient¹⁶.

4) In your region are there any spaces to practice sport and physical activity (parks, walking and cycle path, free sports facilities, ...)?

YES	154	95,7%
NO	7	4,3%

161 Questionnaire

5) Do you think that in your region the public services are sufficient? Such as public schools, public hospital and medical center, free aggregation spaces, sport facilities, public transport

YES	130	81%
NO	31	19%

Questionnaires 161

This aspect also has an impact on the perceived quality of life. 60% of respondents believe that their quality of life is excellent or good, 33% normal and only 4% poor¹⁷.

6) How would you define the quality of live level in your region?

EXCELLENT	22	13,7%
GOOD	78	48,5%
NORMAL	54	33,5%
POOR	7	4,30%
BAD	0	0%

Questionnaires 161

At the level of promotion by local administrations the figure is interesting because 49% of Europeans believe that they do enough while 39% believe that the commitment is not enough, 12% do not know.

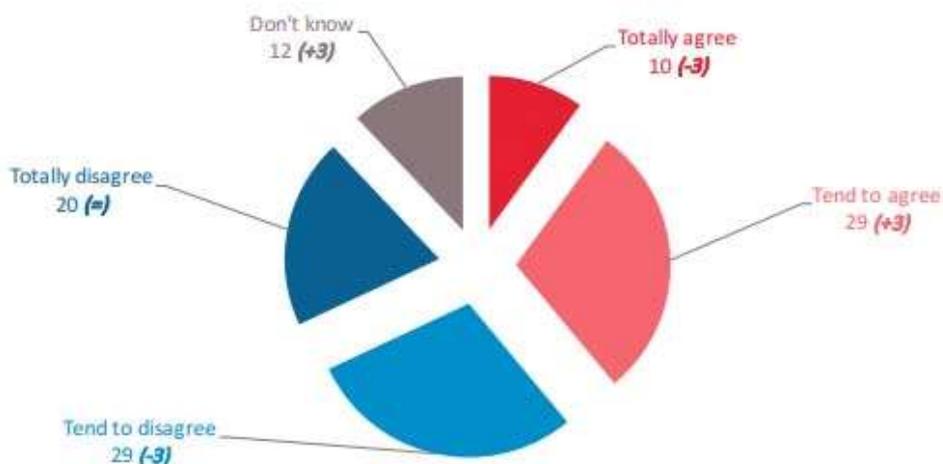

¹⁶ ANNEX 2 – TAB. 2.4/2.5

¹⁷ ANNEX 2 – TAB. 2.6

Let's fit healthy life! *The role of sport in regenerating deprived areas*
 ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

Instead, from our questionnaires a different datum emerges, 48%, an important value, does not know if initiatives are promoted in its territory to favor the practice of physical activity, 44% indicate that are proposed specifying initiatives (walking groups and courses at discounted/subsidized prices)¹⁸. On the other hand, in the promotion of an active lifestyle, more than 80% of the questionnaires analyzed are recognized as present through promotional campaigns on local media and on social networks and the proposal of initiatives to facilitate access to sport (free courses or discounted, creation of pedestrian and cycle tracks, ...).

QB11.3 To what extent do you agree or disagree with the following statements about sport and physical activity?
Your local authority does not do enough for its citizens in relation to physical activities (% - EU)

(Dec. 2017 - Nov.-Dec. 2013)

Base: All respondents (N=28,031)

This is a general picture that photographs the situation of the practice of physical activity in Europe, we now analyze the state of the art in the partner countries of the project, comparing the data collected in the "Physical activity country factsheets (2018)"¹⁹ and those present in the questionnaires that each partner has submitted to at least 30 people equally divided between gender and age group. As already stated the survey through the questionnaires does not claim to have statistical value, the sample is obviously too small, it helps in any case to understand what is the situation of the practice of physical activity and its promotion on the territories involved in the project.

b. Data on sports practice in partner countries

i. P2 – Latvia

25

In 2013, Latvia established the national network of "Health Municipalities" as part of the WHO "Health City" network which was joined by a total of 112 municipalities, representing 94% of all municipalities in Latvia. Every year, information on health promotion is collected through the network and published in a complete annual report. Furthermore, the municipalities in this network share best practices, for example, by visiting other municipalities to exchange experiences. These activities increase the exchange of events organized at the regional level.

The Center for Disease Prevention and Control, with the Ministry of Health, organizes annual capacity building seminars for network coordinators to discuss issues related to health promotion and disease prevention, including physical activity. This is a good example of collaboration between municipalities and the government to promote physical activity.

Latvia is attentive and cutting-edge even in the promotion of exercise prescription, a specific program was established in 2014 by the state sports medicine center, where a training course for general practitioners was developed to ensure that they can prescribe activities physical for primary and secondary prevention. The guidelines have been prepared to prescribe physical activity to specific patient groups, such as those with cardiovascular disease, diabetes, cancer, lung disease, oesteroarthritis, osteoporosis or sarcopenia, even for specific groups, such as young children, pregnant women and seniors²⁰.

These policies of monitoring and promotion of physical activity obviously have effects on the levels of practice of the activity, from the questionnaire it emerges that only 6 people out of 31 interviewed do not practice physical activity, which all interested people believe is useful for health and practice a physical activity (Question 2 - 1 no and 30 yes)²¹ and that it is the basis of a healthy lifestyle (Question 3 - 6 no and 25 yes)²².

The totality of the interviewees believes that there are spaces on the territory for practicing sports (parks, cycle paths, ...) (Question 4)²³, that public services are sufficient (Question 5 - 1 no and 30 yes)²⁴ and that the local authorities support the promotion of the practice of physical activity (Question 8 - 4 no and 27 yes)²⁵. All respondents believe that sport is a tool for social inclusion (Question 10)²⁶. Another fact that underlines the effectiveness of the actions carried out in the context of the promotion of physical activity is the number of respondents who indicate the proposal of initiatives to encourage sports in the workplace (Question 13 - 10 no and 21 yes)²⁷.

²⁶ ANNEX 2 – TAB. 2.10

²⁷ ANNEX 2 – TAB. 2.13

ii. P3 – Portugal

Since 2012 the "National Sport for all program", coordinated by the National Institute of Sport and Youth and with the participation of sports organizations, national sport strategies have been promoted for the entire population.

In 2017, the Portuguese government decided to create the inter-sectoral Commission for the promotion of physical activity as a coordination and leadership mechanism in promoting health and physical activity, involving four ministries: science, technology and higher education, education (including sport), work, solidarity and social security (including the inclusion of people with disabilities) and health. In 2018 the Commission launched a national plan for physical activity with initiatives, at national level, to promote physical activity and reduce sedentariness in nine key areas: health, sport, life-cycle education, surveillance and monitoring, communication and information, work and business, community and civil society, built environment and active mobility and special groups²⁸.

These recent sports promotion policies are reflected in the questionnaires administered, only 3 people responded that they do not practice physical activity (Question 1)²⁹, all believe it is useful to practice sports and almost all (Question 3)³⁰ believe that sport is the basis of a healthy lifestyle.

As regards services, the picture changes, more than 50% believe that the services are not sufficient (Question 5 - 21 no and 16 yes)³¹ and that the local authorities do not sufficiently support the promotion of physical activity (Question 8 - 16 no and 21 yes)³², in fact 17 people out of 37 do not know if initiatives are organized to promote sport among the elderly and people with a chronic illness (Question 11)³³.

At the workplace in prevalence are not proposed initiatives for the promotion of physical activity (Question 13 - 21 no - 10 yes and 4 have not responded)³⁴.

iii. P5 – Spain

In 2015, Spain established a working group dedicated to the promotion of physical activity as a means to improve health, led by the Spanish Agency for Health Protection in Sport, to coordinate the promotion of physical activity.

The "*Strategy for the promotion of physical activity and the fight against sedentarism*" (Estrategia de Fomento de l'Actividad Físico-Deportiva y Lucha Contra el Sedentarismo) is conducted by the High Sports Council and is extended nationally, although each of the 17 autonomous communities have their own strategy³⁵.

From the questionnaires the Spanish reality is rather positive only 3 out of 33 people do not practice physical activity (Question 1)³⁶, for the totality of the interviewees there are spaces for the practice of physical activity/sport (Question 4)³⁷, only 4 out of 33 believe that the services are not sufficient (Question 5)³⁸ and 11 out of 33 people believe that the quality of life is excellent (Question 6)³⁹. Almost all respondents claim that local authorities promote the practice of physical activity (Question 8 - 3 no and 30 yes)⁴⁰. At the workplace, most respondents do not benefit from initiatives to promote sports (Question 13 - 13 yes and 20 no)⁴¹.

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

iv. P6 – Estonia

One of the objectives of the "Sport Development Plan" is to reorient physical education to the development of habits of physical activity practice in the course of life and to the development of motivation for daily activity. Previously, physical education focused on sport; now it focuses on the development of motor literacy.

Schools are obliged to provide mandatory hours, but some schools include additional hours in the curriculum. The quality of physical education is monitored qualitatively and quantitatively based on the opinions of physical education teachers, on the physical environment and on student motivation⁴².

Great attention has been paid to the world of school, this has produced good levels of physical activity, in fact only 9 out of 30 respondents claim not to practice physical activity (Question 1)⁴³, awareness of the benefits of sports (Question 2 and Question 3)⁴⁴ and satisfaction with the services present (Question 4 and Question 5)⁴⁵. Despite the satisfaction with the services present, the perceived quality of life is lower than in the countries (Question 6 - 1 excellent - 10 good - 12 normal - 7 poor)⁴⁶.

All respondents claim that local authorities promote physical activity (Question 8)⁴⁷ even if 18 people out of 30 do not know if initiatives are taken to promote sport among the elderly and the chronically ill (Question 11)⁴⁸. Also for Estonia the promotion of physical activity in the workplace is not so present, only 14 people benefit from initiatives in this sense (Question 13)⁴⁹.

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

v. P1/P7 – Italy

Physical activity levels are continuously monitored through national surveillance systems, promoted by the Ministry of Health and led by the National Institute of Health: "Okkio alla salute" (Child Obesity Surveillance Initiative) collects data on children aged 8 and 9 years; the report "The Health Behavior in School-aged Children" collects data on adolescents aged 11, 13 and 15; "Healthcare Progress in Italy" collects data on adults aged 18 to 69 years. Additional data is collected by the National Statistical Institute.

The promotion of physical activity is a key objective of the national program "Earning health: making healthier choices easier" and of the National Prevention Plan. The "Gaining Health" program is a government initiative, adopted in 2007 and led by the Ministry of Health, which is aligned with the "health in all policies" promotion approach aimed at the prevention of chronic non-communicable diseases.

The 2014-2019 National Prevention Plan includes the promotion of physical activity with a transversal cut, with a life-cycle approach in different contexts, such as schools, workplaces, hospitals and care facilities. All regions are developing structured and coordinated interventions to increase physical activity among young people and adults by 30% and among the elderly by 15%.

Another objective is to develop a culture of an active lifestyle for the entire population and, in particular, young people, socially disadvantaged groups and frail older people⁵⁰.

The emerged data are inserted in this scenario, 9 out of 30 people do not practice any physical activity (Question 1)⁵¹, but everyone believes it is advisable to practice sports and that physical activity is the basis for a healthy lifestyle (Question 2 and Question 3)⁵².

Quality of life is perceived as good (Question 6 - 2 excellent - 21 good and 7 normal)⁵³.

11 respondents claim that local authorities do not support the promotion of physical activity (Question 8)⁵⁴ and 11 people still do not know if sports promotion initiatives are offered for the elderly and the chronically ill (Question 11 - 11 I don't know - 3 no - 16 yes)⁵⁵.

The use of the car for home / work-school trips is prevalent (Question 12 - 16 cars - 6 on foot - 4 public transport - 5 bicycle)⁵⁶. Also in this case no initiatives for the promotion of physical activity are proposed at the workplace (Question 13 - 15 no - 7 yes - 8 did not respond)⁵⁷.

⁵⁰ ANNEX 3 – TAB. 3.5.1/2/3/4

⁵¹ ANNEX 2 – TAB. 2.1

⁵² ANNEX – TAB. 2.2/3

⁵³ ANNEX – TAB. 2.6

⁵⁶ ANNEX – TAB. 2.12

⁵⁷ ANNEX – TAB. 2.13

Let's fit healthy life! *The role of sport in regenerating deprived areas*
ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

vi. P4 - Greece

The estimated levels of the practice of sporting activity offer a framework that bodes well for the future, in fact over 59% of children aged 4 to 12 practice sport, but it creates some concern for the present, in the age group of 13 the percentage it falls to 14%, in that 15 years it falls further to 11% and in adults (20-64 years) it rises slightly to 20%, reaching in any case lower levels than the other partner countries (apart from Latvia). There are several programs to bring the weakest segments of the population closer to sport, "*Sport for all*" was created with the aim of providing the opportunity to be physically active for the entire population. It includes programs for people with disabilities, pre-school age, people with mental disabilities, prisoners and people with toxic addiction problems. The program is funded by the General Secretariat of Sport and is being implemented nationwide.

The program "*Different people - common needs: refugees moving towards a physically active life*" is dedicated to refugees. It was proposed in 2016, coordinated by the Directorate of Physical Education and funded by the European Union. It consists of two sessions of 3 hours of physical activity per week for people in the 15-30 age group living in refugee camps in Athens.

There are no sports promotion programs in the workplace, the promotion is focused on school, in primary school there are 3 hours of compulsory physical education per week and in secondary school 2⁵⁸.

These data reflect on the answers given in the questionnaire. 30% of respondents are students and 40% are professors practicing all physical activity. The totality of those who have children declares that their children, albeit with different levels, do sport.

The situation can certainly be improved and much still needs to be done, from the questionnaires it emerges that 66% of the interviewees maintain that there are no programs for proposing sporting activities outside school hours. It is confirmed that there are no plans to promote physical activity at work (67%).

⁵⁸ ANNEX 3 – TAB. 3.6.1/2/3/4

4. Conclusions

The comparison between the general situation in Europe and the situation in the territories involved by “*Let's fit healthy life! The role of sport in regenerating deprived areas*” Project, outlines that much has been done but much remains to be achieved on health promotion. In fact, in some countries, such as Italy, high levels of inactivity persist.

The surveyed people, in the 6 countries, believe that it is essential to maintain a healthy lifestyle, practicing physical activity. The physical movements are therefore perceived as the basis of a healthy lifestyle.

It is clear that it is therefore important to continue and to increase the policies to promote sports and physical activity raising awareness among a greater number of citizens' groups. Real activities and actions have been done at schools for pupils, in European countries such as Portugal, Spain and Estonia. Their disseminating and promotional policies for schools are focused on encouraging the adoption of correct lifestyles in a life-cycle view.

Also because there is some difficulty in reaching the target groups: partners' actions and policies to promote physical activity and practice sports tend not to reach some "marginal" targets such as the elderly and the people with chronic diseases. It is therefore fundamental to plan better actions to involve them in a direct and active way, triggering a virtuous mechanism of "contamination".

The project should foresee – during the second phase I.O2 – specific initiatives to foster its aims and make a full contamination of the Fitwalking for all.

In order to pursue and achieve this objective, the project “*Let's fit healthy life*” proposes a series of actions distributed at different times and levels; there is the need to intercept the greatest number of people addressed to the target groups of the E+ project: young people, elderly and people with chronic diseases.

The activities for young people will therefore be concentrated during the school period while those ones for the elderly and people with chronic diseases will be scheduled for the whole duration of I.O2.

Considering what emerges by analysed data and the information given by the filled questionnaires, it is recommended to:

- focus on the disseminating and spreading actions about the practice of sports and physical activity with the aim to improve young people and elderly' health and well-being;
- propose activities that should directly reach the identified targets;
- propose actions/activities that should actively involve the identified targets as walking events, walking groups, ...;
- involve and sensitize local stakeholders (local administrations, public health agencies, schools, local associations, sports amateurs, ...) in each scheduled sports action.

“*Let's fit healthy life*” wants to have a strong social impact, through the actions that will be proposed in the areas involved, we want to change people a little and to achieve the following objectives:

- to develop physical activity in deprived areas as “social tool” for inclusion and better life quality;
- to empower more vulnerable groups, such as children and the elderly, with the aim of saving social and health costs;

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

- to raise awareness of how simple it is to adopt a sporty/active lifestyle with little resources;
- to help people to spend their free time well, in a quality way.

“Let's fit healthy life!” involves, in a systemic way, not only people even territories.

Thanks to the project, in the deprived areas involved we want to improve services, not only those related to sport such as sport facilities or cycle and pedestrian path, also social and health services.

At the local level the project has the following objectives:

- to improve the visibility of the deprived areas at national and European level;
- to contribute to environmental regeneration of the deprived areas implementing spaces for physical activity;
- to support the organization of new sport events targeted to all the population that can be too a tourist occasion;
- to spread a new physical activity (fitwalking) for all that in some territories is little known.

Some objectives may seem very ambitious but we are sure that, with good synergy between all local stakeholders, they can be achieved.

ANNEXES

ANNEX 1 - Erasmus Plus Programme

Erasmus + - Programme Guide –versione 2 rettifica del 15/01/2019

https://ec.europa.eu/programmes/erasmus-plus/resources/documents/erasmus-programme-guide-2019_en

Erasmus + is the European Union program in the fields of education, training, youth and sport for the period 2014-2020. Education, training, youth and sport can make a decisive contribution to addressing the socio-economic changes and key challenges that Europe will face until the end of the decade and to support the implementation of the European political agenda for growth, employment, equity and social inclusion.

Combating high levels of unemployment, especially among young people, is one of the most urgent goals for European governments. Too many young people leave school without obtaining a diploma, exposing themselves seriously to the risk of unemployment and social exclusion, just like many unskilled adults. Technologies change the way the company operates and it must be ensured that they are used in the best way. EU companies need to become more competitive through talent and innovation.

Europe needs more inclusive and cohesive societies, in which citizens can actively participate in democratic life. Education, training, youth work and sport are key elements to promote common European values, promote social integration, encourage intercultural understanding and a sense of belonging to a community and prevent violent radicalization. *Erasmus +* is an effective tool to promote the inclusion of people from disadvantaged backgrounds, including newly arrived migrants.

Another challenge is related to the development of social capital among young people, the emancipation of young people and their ability to participate actively in society, in line with the provisions of the *Lisbon Treaty* aimed at "encouraging youth participation to the democratic life of Europe". This issue can also be addressed with non-formal learning activities, aimed at developing the skills and competences of young people and their active citizenship. Furthermore, it is necessary to offer training and cooperation opportunities to youth organizations and animators, in order to develop their professionalism and the European dimension of socio-educational soul.

Education and training systems and efficient youth policies provide citizens with the skills required by the labor market and the economy, while allowing them to play an active role in society and achieve personal fulfillment. Reforms in the area of education, training and youth can consolidate progress towards these goals based on a shared vision among policy makers and stakeholders, accurate data and cooperation between different areas and levels.

The *Erasmus + Program* is designed to support Program countries in their efforts to efficiently use Europe's talent and social capital in a lifelong learning perspective, linking support for formal, non-formal and informal learning. in the fields of education, training and youth. The Program also strengthens the opportunities for cooperation and mobility with partner countries, particularly in the areas of higher education and youth.

Let's
FIT for a
healthy
life

Co-funded by the

PIEMONTE**

Let's fit healthy life! *The role of sport in regenerating deprived areas*

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

In line with one of the new elements introduced in the *Lisbon Treaty*, the *Erasmus + Program* finances activities aimed at developing the European dimension of sport by promoting cooperation between the responsible bodies in this area. The Program promotes the creation and development of European networks, creating opportunities for cooperation between stakeholders and for the exchange and transfer of knowledge and know-how in different areas related to sport and physical activity. This enhanced cooperation will have positive effects especially in developing the potential of European human capital, reducing the social and economic costs of physical inactivity.

The Program supports actions, cooperation activities and instruments consistent with the objectives of the Europe 2020 strategy and its flagship initiatives, such as Youth on the Move and the agenda for new skills and employment. The Program also contributes to achieving the objectives set by the strategic framework for European cooperation in the fields of education and training and the European strategy for youth through open coordination methods.

This investment in knowledge, skills and competences will benefit individuals, institutions, organizations and society as a whole by contributing to growth and ensuring equity, prosperity and social inclusion in Europe and other countries.

Action Sport

Actions in the sports sector will support:

- Collaborative partnerships, with the aim of promoting the integrity of sport (measures to combat doping, match-fixing, child protection), support innovative approaches for implementing the EU principles of good governance in sport, strategies EU in the areas of social inclusion and equal opportunities, **encouraging participation in sport and physical activity** (supporting the implementation of the EU guidelines on physical activity, volunteering, employment in the sports sector, as well as education and training in sports) and support the implementation of the EU guidelines on athletes' dual careers. **These partnerships also include small collaborative partnerships (Small Cooperative Partnerships, SCP), aimed at promoting social inclusion and equal opportunities in sport**, promoting traditional European sports and games, supporting the mobility of volunteers, coaches, managers and staff of sports organizations non-profit and protect athletes, especially the youngest, from health and safety risks by improving the conditions in which training and competitions take place.
- Non-profit European sporting events, granting grants to individual organizations that must prepare, organize and follow up a certain event. The activities involved will include the organization of training activities for athletes and volunteers in the period preceding the event, opening and closing ceremonies, competitions, side activities at the sporting event (conferences, seminars), as well as the implementation of the remaining activities, such as assessments or follow-up.
- **Strengthening of the proven knowledge base for the definition of policies through research, data collection, surveys, networks, conferences and seminars that spread good practices from Program countries and from sports organizations and reinforce networks at EU so that national members of those networks benefit from synergies and exchanges with their partners.**

Palencia Nordic
Walking

Let's fit healthy life! *The role of sport in regenerating deprived areas*

ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

- Dialogue with European stakeholders, mainly the EU Annual Sport Forum and support for Presidency-related sport initiatives organized by EU Member States exercising the EU Presidency semester. To ensure optimal dialogue with stakeholders in the sport sector, other relevant ad hoc meetings and seminars may be organized as appropriate.

35

Actions in the sports sector are expected to lead to the development of the European dimension in the sports field through the generation, sharing and dissemination of experiences and knowledge relating to various issues relating to sport at European level.

Ultimately, sports projects supported by *Erasmus +* must lead to increased levels of participation in sports, physical activities and volunteering. More specifically, the expected results are as follows to :

- **increase of knowledge and awareness regarding sport and physical activity in Program countries;**
- **increase awareness of the role of sport in terms of promoting social inclusion, equal opportunities and physical activity for the benefit of health;**
- **strengthen cooperation between institutions and organizations active in the field of sport and physical activity;**
- **participate to sports organizations and other relevant organizations from various Program countries in advanced networks;**
- **better share good practices.**

TAB. 2.11

11) In your region are proposed some initiative to promote physical activities for seniors, people with a chronic illness (for example diabetes, obesity, ...) or groups with special needs (disabled people, immigrant, disadvantaged people, ...)? If yes, do you know which kind of initiative? If no or if you don't know, do you think that could be useful? Have you any advice?

TAB. 3.1.3 – Latvia

POLICY RESPONSE

Funding allocated specifically to physical activity promotion by sector

Since 2010, the Centre for Disease Prevention and Control has been conducting interventions to promote physical activity. The interventions have several objectives to strengthen the muscles involved in posture, to teach correct breathing techniques to 7- and 8-year olds and to educate seniors (> 54 years) in physical activity. Events are also organized to provide opportunities for older adults to participate in exercises such as Nordic walking.

National policies by sector

Sectors that are involved in each of the national policies or action plans to promote physical activity

Target groups addressed by national policies

- ✓ Low socioeconomic groups
- ✓ Program and activities involving women
- Ethnic minorities
- People deprived of liberty
- Migrants
- ✓ Older people
- ✓ People with disabilities
- People with chronic diseases

Success story

The "U-Bike Portugal" project promotes active transport in academic communities through cycling. The Institute for Mobility and Transport coordinates the project, which rents bicycles to students and staff at academic institutions for a semester or a whole academic year. The project encourages regular physical activity while reducing energy consumption and air pollution. <https://www-u-bike.pt>

MONITORING AND SURVEILLANCE

National recommendations on physical activity for health

TARGET GROUPS INCLUDED

National recommendations on physical activity are being developed in the framework of the Government coordination and leadership of promoting health-enhancing physical activity, with several academic and scientific bodies. They will provide guidelines for all age groups and for specific populations.

Level of physical activity

ESTIMATED PREVALENCE OF SUFFICIENT PHYSICAL ACTIVITY LEVELS

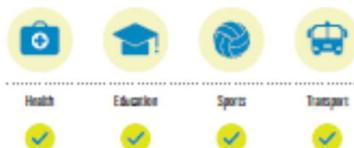

Data on levels of physical activity were obtained from the 2010 Eurobarometer survey (EB6827). Exercise, sport or other physical activity is performed almost daily by 9% and a few times a week by 26% of the population. Additional data on children and adolescents were collected in 2010 by the Portuguese Institute of Sports and Youth.

Monitoring and surveillance of physical activity

SECTORS WITH SURVEILLANCE SYSTEMS

Physical activity levels in Portugal are monitored by the Portuguese Institute of Sports and Youth (National Physical Activity and Sports Monitoring System), by the Directorate-General of Health (Physical Activity as a Vital Sign in primary health care) and by the Directorate-General of Education (FITschool programme). The Institute for Mobility and Transport operates a terrestrial transport observation system, which includes walking and cycling.

Let's fit healthy life! *The role of sport in regenerating deprived areas*
 ERASMUS+ SPORT PROJECT - Collaborative Partnerships - Grant Agreement n. 2018 – 3835 /001 – 001

TAB. 3.2.3 – Portugal

POLICY RESPONSE

Funding allocated specifically to physical activity promotion by sector

Since 2012, the “National sports for all programme”, coordinated by the Portuguese Institute of Sports and Youth and with the participation of the sports sector and non-governmental and private sector organisations, has promoted sports for the entire population and related national strategies. <http://www.idesportia.pt/contenuto.aspx?id=173&idMeno=4>

In 2007, the Portuguese Government decided to create the Intersectoral Commission for the Promotion of Physical Activity as the coordination mechanism and leader in promoting health-enhancing physical activity, involving four ministries: Science, Technology and Higher Education; Education (including sports); Work, Solidarity and Social Security (including the inclusion of people with disabilities); and Health.

“Physical activity as a vital sign” (Atividade física como sinal vital) is a monitoring and surveillance system created for the Portuguese primary health care system to assess the population’s physical activity levels and sedentary behaviour on electronic medical records. The Directorate-General of Health and the Shared Services of the Ministry of Health developed this tool, which was integrated into the database of the software “SClinica – Primary Health Care” in September 2007. Three types of health professionals use this platform currently: medical doctors, nurses and registered dietitians and nutritionists, and it is available in most primary health care units in the country. <http://www.panal.gov.pt/indicativos/atividade-fisica-como-sinal-vital>

National policies by sector

Sectors that are involved in each of the national policies or action plans to promote physical activity

The National Action Plan for Physical Activity, led by the Intersectoral Commission for the Promotion of Physical Activity, was launched in April 2008. This Plan includes national initiatives (policies, programmes, projects and events) to promote physical activity and/or reduce sedentary behaviour in nine core areas: health, sports, education throughout the lifecycle, surveillance and monitoring, communication and information, work and companies, communities and civil society, built environment and active mobility, and special groups. <http://www.panal.gov.pt>

Target groups addressed by national policies

“Pain walkways” (Passadizos do Pain) are located on the left bank of the Paina River, in Ansoara municipality. They consist of 8 km of walks through a beautiful natural environment, extending from the river beaches of Ansoara, Vila and Espinosa. <http://www.passadizosdepaina.pt>

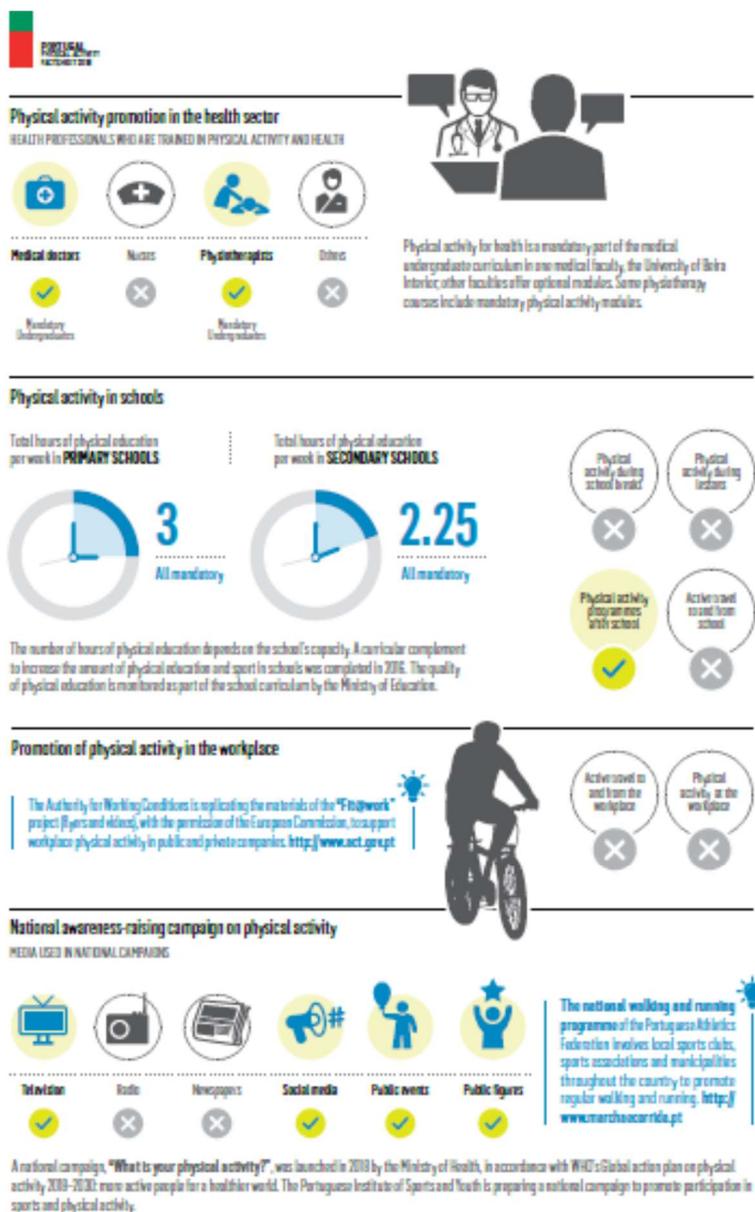

“Diabetes in movement” (Diabetes em Movimento) is a community exercise programme designed for middle-aged and older people with type 2 diabetes. Patients are recruited by family doctors to engage in free-of-charge group sessions (75 min, 3 days per week, 8 months per year) of low cost, broadly applicable exercise, supervised by exercise physiologists and nurses. This national programme is implemented at local level in community health centres, hospitals, universities and municipalities, with the support of the Directorate-General of Health. <http://www.diabetesemmovimento.com>

Success story

"Positive parenting" targets parents and guardians of children aged 0-3 years and health professionals. It is a priority intervention of the Health Promotion and Prevention Strategy and covers four axes: parental bonding, healthy diets, physical activity and active play and rest and sleep. The intervention includes online, open, free training for mothers, fathers and other people with parenting functions. To ensure equity, online training is also proposed to health professionals, so that they can deliver the intervention to groups face-to-face. One edition of the course was adapted for social and health professionals who are in contact with Roma people, to ensure that they also benefit from positive parenting group interventions.

MONITORING AND SURVEILLANCE

National recommendations on physical activity for health

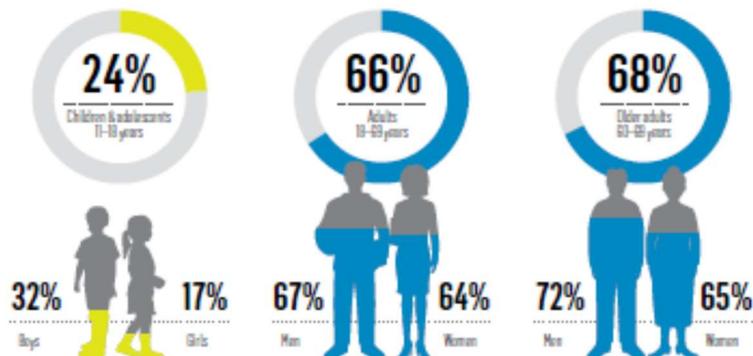

TARGET GROUPS INCLUDED

The national recommendations were implemented in 2015 and are based on WHO's global recommendations on physical activity for health (2010) and the recommendations of the Centers for Disease Control and Prevention and the American College of Sports Medicine (2005) in the USA. As a result of collaboration between the Ministry of Health, Social Services and Equality, the Ministry of Education, Culture and Sports and the National Sports Council, within the framework of the Strategy for Health Promotion and Prevention of the National Health System, national recommendations on physical activity for health, sedentary behaviour and screen time were published for the entire population. http://www.mscbs.gob.es/profesionales/saludPublica/prevPromocion/Estrategia/Recomendaciones_ActivFisica.htm

Level of physical activity

ESTIMATED PREVALENCE OF SUFFICIENT PHYSICAL ACTIVITY LEVELS

Monitoring and surveillance of physical activity

SECTORS WITH SURVEILLANCE SYSTEMS

Physical activity in Spain is assessed through the International Physical Activity Questionnaire (short version) and in the Food, Physical Activity, Child Development and Obesity (Alimentación, Actividad Física, Desarrollo Infantil y Obesidad, ALADINO) study.

TAB. 3.3.3 – Spain

POLICY RESPONSE

Funding allocated specifically to physical activity promotion by sector

In 2015, Spain established a multibidirectional National Health-enhancing Physical Activity Working Group, led by the Spanish Agency for the Protection of Health in Sports, to coordinate the promotion of physical activity.

The "Strategy for the promotion of physical activity and the fight against sedentarism" (Estrategia de Fomento de la Actividad Física Deportiva y Lucha Contra el Sedentarismo) is led by the High Council of Sports and is being extended to national level, although each of the 17 autonomous communities has its own strategy.

The aim of the "Integral course on lifestyle in primary care linked to community resources" is to integrate the assessment and promotion of healthy lifestyles systematically into standard practice in primary care. The "5 A's" (Ask, Advise, Assess, Assist and Arrange) intervention addresses the main risk factors (an unhealthy diet, inadequate physical activity, consumption of a unhealthy foods, harmful use of alcohol, smoking, poor emotional well-being, access to environment and falls). The Ministry of Health, Consumer Affairs and Social Well-being provides a course on physical activity and health (health effects, determinants, effective interventions, etc.) for health and sports professionals. This course, initially called "Actívate, accésaje salud", was used to train 133 professionals and in 2017 was developed into e-learning courses.

In addition to general education, the Ministry of Health, Social Services and Equality established a course "Get active, advise health" (Actívate, accésaje salud) in 2012, which provides training in physical activity and health.

Physical activity in schools

Total hours of physical education per week in PRIMARY SCHOOLS: 2 (All mandatory)

Total hours of physical education per week in SECONDARY SCHOOLS: 2 (All mandatory)

As Spain consists of 17 autonomous regions, the number of hours of physical education may vary. Nevertheless, the Government regulates the minimum hours of certain subjects in educational curricula. Physical education is a major element of the national policy, whereby all the regions are encouraged to ensure daily exercise and schools are urged to promote exercise through professional guidance.

Physical activity during school breaks	Physical activity during lessons
Physical activity programmes into school	Active travel to and from school

Promotion of physical activity in the workplace

The campaign "Climb the stairs I'm in" (¡Sube por las escaleras, no apurtes!) promotes the use of stairs in the workplace. Messages are posted visibly to signal access to stairs, and posters reinforce the messages. The Ministry of Health proposes the design of messages to be used by any interested institution. <https://www.msssi.gob.es/profesionales/saludPublica/promoPromocion/Estrategia/04escolares.htm>

Success story

"Schools in motion" is a multicomponent approach to promote the physical activity of students in school through active lessons, active recess, active transport and physical education lessons supporting lifelong physical activity. Measures have been introduced to improve indoor and outdoor environments for physical activity. A key element of the project is the involvement of all school personnel, students and parents in developing the interventions.

A recreational activity grant system was established nationally in 2018 by the Estonian Youth Work Centre to create possibilities for versatile development of young people by systematic, informal learning. The main aim of the model is to increase participation in recreational activities among young people who are not currently participating. Nongovernmental organizations can apply to local municipalities for a grant, and applications are assessed on the basis of whether they will increase the availability and the diversity of options and improve the quality of recreational activities.

Physical activity in schools

Total hours of physical education per week in **PRIMARY SCHOOLS**

Two or three 45-min lessons per week. In grades 1-3 and 4-6, a total of eight physical education lessons are allocated by the school. For example, three lessons per week in grade 1, two per week in grade 2 and three per week in grade 3. In grades 7-9, two 45-min sessions in each grade.

Total hours of physical education per week in **SECONDARY SCHOOLS**

The national curriculum stipulates that, during the 3 years of secondary school, students should have 35 courses of 45 min of physical education. <https://www.ohm.ee/en/national-curricula-2014>. Schools must also offer two optional courses.

Schools are obliged to provide the mandatory hours, but some schools include additional hours in the curriculum. The quality of physical education is monitored qualitatively and quantitatively from the opinions of physical education teachers, the physical environment and students' motivation.

2-3

NI mandatory

Physical activity during school break

Physical activity during lessons

Physical activity programmes at school

Active travel to and from school

Much research has been conducted in Estonia since 2004 on the quality of physical education. Both quantitative and qualitative methods have been used to explore the opinions of physical education teachers. In 2013, the physical conditions for organized physical education in schools were also studied and the opinions of physical education teachers assessed. Several other studies have looked at students' motivation and attitudes towards physical education, and a major survey was conducted in 2018 in which students in grades 4, 8 and 11 and their parents and teachers were asked about physical activity and physical education. This survey will be repeated annually. More information can be found in the document "Physical education concept. Upgrading Estonian physical education" (2017).

Promotion of physical activity in the workplace

TAB. 3.5.2 – Italy

MONITORING AND SURVEILLANCE

National recommendations on physical activity for health

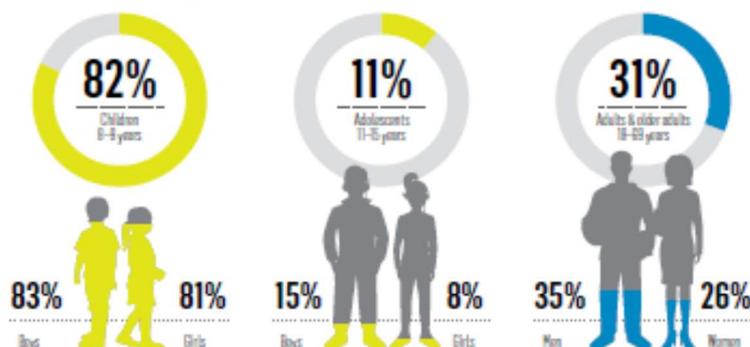

TARGET GROUPS INCLUDED

National recommendations are currently being prepared by a working group established by the Ministry of Health. They are based on WHO's global recommendations on physical activity for health (2010).

Level of physical activity

ESTIMATED PREVALENCE OF SUFFICIENT PHYSICAL ACTIVITY LEVELS

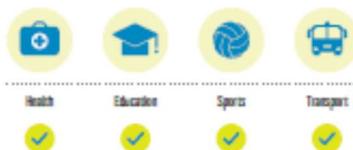

DKMie: % children 8-9 years old who performed physical activity the day before the survey; HBSC: % of adolescents who performed at least 60 minutes of physical activity every day; PASS: % adults who reported having a physically active job, did 30 minutes of moderate activity at least 5 days per week or at least 20 minutes of intense physical activity at least 3 days per week in the 30 days before the survey.

Monitoring and surveillance of physical activity

SECTORS WITH SURVEILLANCE SYSTEMS

Physical activity levels are monitored continuously through the following national surveillance systems, promoted by the Ministry of Health and led by the Istituto Superiore di Sanità: DKMio alla salute (Child Obesity Surveillance Initiative) collects data on children aged 8-9 years; The Health Behaviour in School-aged Children survey collects data on adolescents aged 11, 13 and 15 years; Progressi della Azienda Sanitaria per la Salute in Italia collects data on adults aged 18-69 years. Additional data are collected by the National Institute for Statistics.

TAB. 3.5.3 – Italy

POLICY RESPONSE

Funding allocated specifically to physical activity promotion by sector

The "Sport at Schools" programme was established in 2017 to increase physical activity through sports in primary schools via a multi-faceted approach for students, teachers, school principals and families. The objectives are to promote participation in sports and increase physical education and the educational values of sport. It is implemented by the Italian Ministry of Education, University and Research and the Italian National Olympic Committee.

National policies by sector

Sectors that are involved in each of the national policies or action plans to promote physical activity

Promotion of physical activity is a key objective of the national programme, "Gaining health: making healthy choices easier" and the National Prevention Plan. The "Gaining health" programme is a Government initiative, adopted in 2017 and led by the Ministry of Health, which is aligned with the "health-in-all-policies" approach to promoting healthy behaviour for the prevention of noncommunicable diseases. The National Prevention Plan 2014-2018 includes promotion of physical activity in a cross-cutting, life-cycle approach in various settings, such as schools, workplaces, communities and health care facilities. All regions are developing structured, coordinated interventions to increase physical activity among young people and adults by 30% and among older adults by 15%. A further aim is to develop a culture of an active life style for the entire population and especially young people, socially disadvantaged groups and frail older adults.

Target groups addressed by national policies

- ✓ Low socioeconomic groups
- ✓ Pregnant and breastfeeding women
- ✓ Ethnic minorities
- ✓ People deprived of liberty
- ✓ Migrants
- ✓ Older people
- ✓ People with disabilities
- ✓ People with chronic diseases

The transport survey "Comuni ciclabili" was established in 2017 by the Italian Cycling Federation and is funded by the National Association of Italian Municipalities.

Success story

The "Swimming school programme" for 8-9-year old pupils was launched as a pilot project in Athens in 2015 and was then extended throughout Greece, involving 2000 groups of over 44 000 pupils and 260 teachers of physical education nationally in 2018. The programme emphasises physical activity and teamwork through swimming. Pupils also learn about basic safety and hygiene and develop individual and social competences. Each trimester consists of 12 mandatory swimming lessons. The Programme is part of each school's physical education course.

TAB. 3.6.3 – Grecia

POLICY RESPONSE

The aim of the "Sports for all" programme in Greece is to provide opportunities for the wider population to be physically active. It includes programmes for people with disabilities, preschoolers, children and older adults and also in mental health facilities, prisons and as part of drug rehabilitation. The programme is funded by the General Secretariat of Sports and is being implemented nationwide.

Sports for all programmes are delivered to older adults as an opportunity to exercise and are conducted in cooperation with municipalities, foundations and sports clubs. Two sport events have also been held: the "World senior games" for people aged + 50 years in 2011 and the "482 for silver reality" in 2012.

National policies by sector

Sectors that are involved in each of the national policies or action plans to promote physical activity

The aim of the "Different people – common needs: developing mobility towards a physically active life" programme is to support refugees in being physically active. The programme was established in 2016, is coordinated by the Directorate of Physical Education and is funded by the European Union. It provides twice a week sessions of physical activity per week for people aged 15-20 years living in refugee camps in Athens.

Target groups addressed by national policies

- Low socioeconomic groups
- Pregnant and breastfeeding women
- Ethnic minorities
- People deprived of liberty
- Migrants
- Older people

Physical activity promotion in the health sector

REINFORCED COOPERATION WITH AN EXPERT IN PHYSICAL ACTIVITY MEDICINE IN IT

Physical activity for health is taught as an independent module in the curriculum of physical education teachers in both primary and secondary schools. In addition, physical activity theory and best practice are taught as part of other modules of instruction and coaching in various sports, including football, basketball, track and field games and volleyball.

Physical activity in schools

Total hours of physical education per week in **PRIMARY SCHOOLS**

Total hours of physical education per week in **SECONDARY SCHOOLS**

Promotion of physical activity in the workplace

National awareness-raising campaign on physical activity

REINFORCED NATIONAL CAMPAIGN

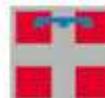

A "National school day" was implemented for the first time in 2014 and is organized on the first Monday of October every year in all schools in Greece, involving all teachers and pupils. About 120 000 students in 1000 schools take part in organized sports events indoors and outside the school area. The event takes place during lessons, holistic approach to promoting health and quality of life, with the broad goal of achieving public health and economic benefits for the country.
