financed by the European Union

Promoting the European Union Space Programme

Our market reports are going to be available online shortly – outlining opportunities for EU business around the world

Global Markets

The EU Global Action on Space is currently producing country-level market reports on different regions around the world. These reports are targeted at EU space businesses that want to enter new markets outside the EU or expand their business in existing markets outside the EU. We will update the reports annually during the lifetime of the EU Global Action on Space.

The reports will offer, among others:

- In-depth analysis of each local space market, the knowledge of EU space components (GNSS and Copernicus) and their market development potential
- An analysis of market gaps and opportunities for EU space businesses at country and regional levels

Please check back for publication of the first market reports in early 2022.

The Global Action is interested in your input for services to provide

Events & Outreach

- What webinar/event topics related to the EU Space Programme and its applications would be beneficial for Nereus and its members?
- Are Nereus and its members interested in interacting with non-EU space stakeholders (e.g. private companies, regions) – and on which topics (e.g. showcasing regional space clusters)?
- ...

EU Space Platform

- Which information gaps regarding the EU Space Programme could the EU Space Platform close?
- ...
