

LEGENDA

Gli istogrammi realizzati per ciascun Comune censito hanno il solo scopo di fornire, caso per caso, un'idea immediata delle tipologie (di manufatti ed impieghi) incontrate durante il censimento e della loro distribuzione.

Poiché il numero di sopralluoghi effettuati (dipendente dal numero di autodenunce) è estremamente variabile da un Comune all'altro (e mai esaustivo) tali istogrammi forniscono solo un'informazione parziale (non necessariamente rappresentativa della situazione complessiva sul territorio comunale) e non sono in alcun modo confrontabili tra di loro.

Tipologie presenti

Coperture edifici ad uso privato: si intendono per edifici ad uso privato quelli ad uso civile, commerciale, industriale e le aziende agricole.

Coperture edifici ad uso collettivo: si intendono per edifici ad uso collettivo scuole, asili, parrocchie (edifici parrocchiali utilizzati dalla comunità), ospedali, cimiteri, ospizi, caserme ecc. .

Polverino confinato non accessibile: polverino utilizzato come isolante situato in un sottotetto (locale confinato) ma reso non accessibile in qualche modo (ad es. ricoperto).

Polverino confinato accessibile: polverino utilizzato come isolante situato in un sottotetto (locale confinato) ma accessibile.

Battuto area libera privata: polverino utilizzato come pavimentazione di cortili, piazze, vialetti

- altri manufatti contenenti amianto: tubi, canne fumarie, camini, vasche per l'acqua, pannelli, feltri (coperte).

Rimosso: materiale non più in opera ancora presente sul posto in attesa di smaltimento.
